Viva Healthcare Packaging launches tube with new look + high barrier for Mentholatum OXY (2015-04-28)

Viva is very proud to announce its latest tube product launch for Mentholatum USA, for the company's 'OXY' personal care product series.

Viva's injection-molding and in-mold labeling process has provided an exciting new look for Mentholatum's OXY product line. At the same time, the Viva Injection-molded Tube provides a high level of barrier properties to ensure products containing challenging ingredients such as Salicylic Acid and Benzoyl Peroxide, remain intact and protected.

The Viva Injection-molded Tube serves a wide range of applications, from less aggressive personal care products to highly sensitive pharmaceutical products.

All common tube sizes available with the same benefits: amazing graphics, short lead times and low environmental impact!

For further information, visit Viva at:

- **Luxepack New York, May 13-14, New York USA: Booth C208**
- **Cosmoprof North America, July 12-14, Las Vegas USA: Booth 20457**

Viva Healthcare Packaging is a global leader in injection-molded tube manufacturing with ISO and GMP certified operations in Canada, Hong Kong and Poland.
