### **Viva Healthcare Packaging launches tube production in Poland** ( 2013-12-07 )

Viva Healthcare Packaging, a global injection-molded tube manufacturer with ISO and GMP certified tube operations in Canada, Hong Kong and Poland, has recently launched tube production in Poland. This is Viva's third tube production location and will serve the European market. The line will strongly reinforce the company's global footprint.

With the Viva tube now available from Poland's facilities, the company can now serve global customers with high quality, consistent and standardized products as the exact same specifications are available at any of the three global locations.

The Poland location has mass production volumes of 30mm, 35mm, 40mm, and 50mm diameter tube sizes, along with standard caps made in-house, offering benefits in terms of enhanced graphics, shorter lead times, and improved sustainability.
