### **Viva Healthcare's triple launch: Dual Chamber Tube, Oval Tube, and tube accessories** ( 2013-12-06 )

Viva Healthcare Packaging, a global tube manufacturer, has recently launched three new products: The Dual Chamber Tube, the Oval Tube, and Tube Accessories. All three lines are unique injection-molded solutions offering customizable shapes and designs.

#### **Dual Chamber Tube**

The Dual Chamber Tube is a simple and reliable way to package two different formulas in one single tube. This unique product can only be produced by the injection-molding process with in-mold labelling and requires minimal tube line adaptation to operate.

#### **Oval Tube**

The Oval Tube product line is offered to complement Viva's standard injection-molded products with rounded in-mold labelled tubes. The Oval Tube comes in the exact same tube sizes and also with the same high-definition in-mold label decorations. The solution offers high quality graphics, short lead time, and improved sustainability.

#### **Tube Accessories**

These accessories are easily adaptable to Viva's small size standard injection-molded tubes with in-mold labelling. Tube Accessories offer brands a way to ensure that their smaller tubes have just as much impact and consistency as their larger tube counterparts. Viva Healthcare Packaging is a global injection-molded tube manufacturer with ISO and GMP certified tube operations in Canada, Hong Kong, and Poland.
